

FIA FORMULA 1 WORLD CHAMPIONSHIP

2026 BAHRAIN GRAND PRIX IN MALAYSIA

02 - 04 October 2026

From	The FIA Formula 1 Media Delegate	Document	12
To	All Teams, All Officials	Date	02 October 2026
		Time	10:03

Title Car Presentation Submissions

Description Car Presentation Submissions

Enclosed 2026 Bahrain Grand Prix in Malaysia - Car Presentation Submissions.pdf

Roman De Lauw

The FIA Formula 1 Media Delegate

FIA FORMULA 1 WORLD CHAMPIONSHIP

Car Presentation – Bahrain Grand Prix McLaren Mastercard F1 Team

	Updated component	Primary reason for update	Geometric differences compared to previous version	Brief description on how the update works (min 20, max 100 words)
1	Coke/Engine Cover	Circuit specific - Cooling Range	High Cooling Bodywork	To meet the high cooling demands of this and the upcoming circuits, a new engine cover aiming at increased cooling massflow has been designed.

Car Presentation – 2026 Bahrain Grand Prix in Malaysia

Mercedes-AMG PETRONAS F1 Team

	Updated component	Primary reason for update	Geometric differences compared to previous version	Brief description on how the update works (min 20, max 100 words)
1	Floor Board	Performance – Local Load	Reprofiled horizontal elements, and vertical slotted upper element added.	Reprofiled elements and new vertical elements added to improve local pressure distribution, reduce separations at the extremes of the operating envelope, and improve flow to the rear of the car, resulting in increased load.
2	Floor Leading Edge	Performance - Flow Conditioning	Reprofiled and additional down-washing elements added.	Additional down-washing elements increase local load and outwash, improving flow to the rear of the car and increasing rear floor load.
3	Floor Corner	Performance - Flow Conditioning	Additional slots and reprofiled elements.	Re-optimisation of floor corner slot arrangement to both increase local load and to also improve flow into the diffuser and hence rear load.
4	Floor Body	Performance – Local Load	Reprofiled diffuser roof, sidewall, and winglet.	Through re-optimisation of the diffuser roof and sidewall we have increased local load and improved robustness throughout the operating envelope.
5	Rear Suspension	Performance – Local Load	Reprofiled suspension fairings.	Track rod and driveshaft camber re-distributed to increase local load whilst improving coupling with diffuser winglet and rear drum furniture.
6	Rear Corner	Performance – Local Load	Rear winglet span and position change.	Chord and position of the rear drum winglets re-optimised to work with above fairing update and to improve rear tyre wake control across the operating envelope.
7	Rear Bodywork	Performance - Flow Conditioning	Reduce volume, increased sideview ramp.	Reduce volume and increased sideview ramp increases downwash to the rear floor and rear drum, resulting in more load.

FIA FORMULA 1 WORLD CHAMPIONSHIP

Car Presentation – Bahrain (Sepang) Grand Prix Oracle Red Bull Racing

	Updated component	Primary reason for update	Geometric differences compared to previous version	Brief description on how the update works (min 20, max 100 words)
1	Floor Board	Performance - Local Load	Revised Floor Board geometry	Applied above the existing floor foot geometry, the new board realises development work to extract more load locally whilst maintaining flow stability behind the front tyres.

FIA FORMULA 1 WORLD CHAMPIONSHIP

Car Presentation – Bahrain Grand Prix Scuderia Ferrari HP

	Updated component	Primary reason for update	Geometric differences compared to previous version	Brief description on how the update works (min 20, max 100 words)
1	Diffuser	Performance - Local Load	Diffuser outboard winglet cascade element development	Not Sepang track specific, this very localized development around the diffuser winglet cascade is providing a favourable additional downforce across the entire car operating envelope

Car Presentation – Bahrain Grand Prix in Malaysia

Visa Cash App Racing Bulls

	Updated component	Primary reason for update	Geometric differences compared to previous version	Brief description on how the update works (min 20, max 100 words)
1	Front Wing	Circuit specific - Balance Range	New front flap	A longer chord flap for the front wing that was introduced at the previous event increases the load that can be generated by the wing, meeting the aero balance requirements for this circuit.
2	Rear Wing	Performance - Local Load	Revised rear wing auxiliary components	An improved design of the rear wing support components allows the rear wing to perform more effectively, increasing the efficiency of load generated.
